The next generation of PARI VORTEX®, now even more user friendly, helps minimize the technique and coordination needed for effective inhaler treatments. Patients of all ages are assured a more efficient and consistent medication dose from their MDI for optimal treatments.
**THE DIFFERENCE IS IN THE DELIVERY**

Vortex significantly reduces oropharyngeal deposition, which may cause unwanted side effects, vs. MDI alone.

![Throat Deposition Graph]

Vortex delivers a higher respirable drug dose than MDI alone and OptiChamber Diamond.

![Fine Particle Dose Graph]

**VORTEX Grows With Your Patients**

From infant to adult, Vortex offers a series of facemasks for various age groups, eliminating the need to purchase a new holding chamber when changes in mask size are needed.
